Kleen-Santoemma Sabrina upholstery/spot cleaner

Injection-Extraction Cleaning

A solution of water and chemical is sprayed into the fibers of the textile and immediately sucked. The solution and the dirt removed are recovered into the machine body.

Kleen-Santoemma Sabrina Upholstery/Spot Cleaner

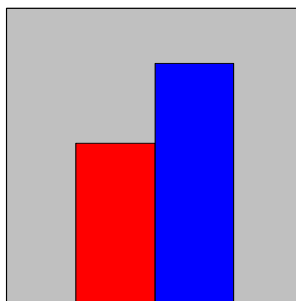

is a machine especially designed to clean upholstery, car interiors, spot cleaning as well as small areas of carpets. Sabrina is suitable for professional use and designed to be very heavy duty. Its high-waterlift vacuum system allows to recover the maximum quantity of dirt and get the shortest drying time.

HIGH WATERLIFT technology

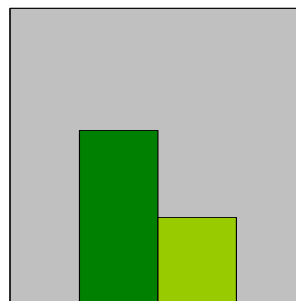

When cleaning textiles, the drying time after vacuuming strongly depends on the vacuum strength.

Specially designed **two & three stages** and **high waterlift** vacuum motors are equipped on Santoemma machines, allowing to get up to 50% higher waterlift than standard carpet extractors. This results in a **half drying time** than with normal machines.

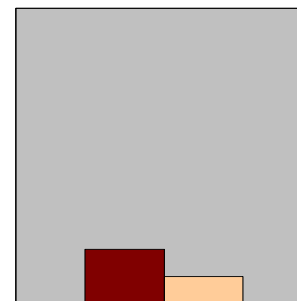

Not only the drying time is reduced, but also a **better cleaning result** is obtained, since the extra solution extracted from carpet fibers contains extra dirt removed from the carpet surface. The same residual dirty solution, if left evaporating on carpet as it normally happens, would leave the carpet not so clean as with high waterlift machines.

Waterlift

Drying time
